Guide to Development of a Training Curriculum on 
**Essential Emergency Surgical Skills**

(Compiled from WHO manual Surgical Care at the District Hospital 2003)

### PART 1: ORGANIZING THE DISTRICT HOSPITAL SURGICAL SERVICE

1. Organization and management of the district surgical service | Page No
   - 1.5 Record keeping | 1–13
   - 1.6 Evaluation | 1–15
   - 1.7 Disaster and trauma planning | 1–17

2. The surgical domain: creating the environment for surgery | 2–1
   - 2.1 Infection control and asepsis
     - Universal precautions
     - Hand washing
     - Prevention of transmission of HIV
     - Aseptic technique
   - 2.2 Equipment | 2–4
     - Care and repair
     - Use
   - 2.3 Operating room | 2–6
     - Room maintenance
     - Sponge and instruments count
     - Scrubbing and gowning
     - Skin preparation
     - Draping
   - 2.4 Cleaning, sterilization and disinfection | 2–11
   - 2.5 Waste disposal | 2–13

### PART 2: FUNDAMENTALS OF SURGICAL PRACTICE

3. The surgical patient | 3–1
   - 3.1 Approach to the surgical patient
     - History and physical examination
     - Investigations
     - Decision making
     - Preoperative note
     - Preparation of surgery
     - Intra-operative care
     - Operative note
     - Postoperative note and orders
     - Aftercare- prevention of complications and pain management
   - 3.2 The paediatric patient | 3–6
     - Physiological considerations
     - Anaesthesia and pain control
     - Pre and post operative care
     - Surgical problems in neonates
     - Surgical problems in young children

4. Surgical techniques | 4–1
   - 4.1 Tissue handling
     - Incision technique
     - Haemostasis
   - 4.2 Suture and suture technique | 4–2
   - 4.3 Prophylaxis | 4–10
5. Basic surgical procedures

5.1 Wound management 5–1
- Primary repair, delayed primary closure, secondary healing
- Drains
- Split skin grafting

5.2 Specific lacerations and wounds 5–5
- Blood vessels, nerves and tendons
- Facial lacerations
- Lip lacerations
- Wounds of tongue
- Ear and nose lacerations
- Nose Bleed
- Ocular trauma
- Measurement of intraocular pressure
- Tendon lacerations
- Animal lacerations

5.3 Burns 5–13
- Classification of depth of burn
- Wound care

5.4 Foreign bodies 5–16
- Eye, Ear, Nose
- Airway
- Gastrointestinal tract
- Soft tissue
- Body cavities

5.5 Cellulitis and abscess 5–19
- Surgical drainage
- Specific sites- face, eye, ear, dental, throat and neck, breast, thoracic empyma, pyomyositis, hand infections, perianal rectal and pilonidal sinuses

5.6 Excision 5–40
- Perianal haematoma, anal fissure, haemorrhoids

PART 3: THE ABDOMEN

6. Laparotomy and abdominal trauma

6.1 Laparotomy 6–1
- Laparotomy for patients with life threatening abdominal conditions including trauma

6.2 Abdominal trauma 6–4
- Primary survey
- Diagnostic peritoneal lavage
- Penetrating and blunt injuries

7. Acute abdominal conditions

7.1 Assessment and diagnosis 7–1

7.2 Intestinal obstruction 7–2
- Non operative and operative management

7.3 Peritonitis 7–4

7.4 Stomach and duodenum 7–5
- Medical management of Bleeding peptic ulcer

7.6 Appendix 7–10
- Emergency appendectomy for acute appendicitis
Management of intussusception and sigmoid volvulus

8. Abdominal wall hernia
   8.1 Groin hernias
   8.2 Surgical repair of inguinal hernia
   8.4 Surgical treatment of strangulated groin hernia

9. Urinary tract and perineum
   9.1 The urinary bladder
      9.1.1 Urethral catheterization of male patient
      9.1.2 Suprapubic puncture
      9.1.3 Suprapubic cystostomy
   9.2 The male urethra
      9.2.1 Urethral dilation for urethral stricture
      9.2.2 Male circumcision
      9.2.3 Orchidectomy for torsion testis
      9.2.4 Surgery for scrotal hydrocele in adults
      9.2.5 Vasectomy
   9.3 The perineum
      9.3.1 Female genital injuries and mutilation
      9.3.2 Perineal abscess, Bartholin abscess, hematocolpos
      9.3.3 Male perineal infections- Fournier’s gangrene, periurethral abscess

PART 4: EMERGENCY OBSTETRIC CARE

10. Hypertension in pregnancy
   10.1 Hypertension
   10.2 Assessment and management
   10.3 Delivery
   10.4 Postpartum care
   10.5 Chronic hypertension

11. Management of slow progress of labour
   11.1 General principles
   11.2 Slow progress of labour
   11.3 Progress of labour
   11.4 Operative procedures
      11.4.1 Caesarean section
      11.4.2 Tubal ligation during Caesarean section
      11.4.3 Induction and augmentation of labour
      11.4.4 Instrumental delivery- vacuum extraction, forceps delivery
      11.4.5 Craniotomy and craniocentesis

12. Bleeding in pregnancy and childbirth
   12.1 Bleeding
      12.1.1 Bleeding in early pregnancy- spontaneous abortion, induced abortion
      12.1.2 Unsafe abortion, septic abortion, ectopic pregnancy
      12.1.3 Bleeding in late pregnancy and labour- placental abruption, placenta praevia, uterine rupture
      12.1.4 Post partum haemorrhage
   12.2 Diagnosis and initial management
   12.3 Specific management
Complete abortion
Ectopic pregnancy- autologous blood transfusion
Abruptio placenta
Coagulopathy (Clotting failure)
Ruptured uterus
Placenta praevia
Atonic uterus
Tears of cervix, vagina, perineum
Retained placenta
Inverted uterus
Delayed Post partum haemorrhage

12.4 Procedures
Manual vacuum aspiration
Dilation and curettage
Culdocentesis
Colpotomy
Salpingectomy for ectopic pregnancy
Salpingostomy
Repair of ruptured uterus
Repairing the uterine tear
Rupture through cervix and vagina
Rupture laterally through uterine artery
Rupture with broad ligament haematoma
Repair of bladder injury
Manual removal of placenta
Repair of cervical tears, vaginal and perineal tears
Management of neglected cases- haematoma, infections, necrotising fascitis, faecal incontinence, rectovaginal fistula,
Uterine inversion
Uterine and utero-ovarian artery ligation
Post partum hysterectomy

12.5 Aftercare and follow-up
Abortion
Ectopic pregnancy
Molar pregnancy
Bleeding in late pregnancy and labour and post partum haemorrhage

PART 5: RESUSCITATION AND ANAESTHESIA
13. Resuscitation and preparation for anaesthesia and surgery
13.1 Management of emergencies and cardiopulmonary resuscitation
Airway and breathing
Cardiac arrest and inadequate circulation
Cardiac life support
Haemorrhage
Shock
Unconsciousness
13.2 Other conditions requiring urgent attention
Anaemia
Convulsions
13.3 Intravenous access
13.4 Fluids and drugs
- What fluids to give
- How much to give
- Paediatric fluids
- Speed of intravenous fluid therapy
- What blood pressure should you aim for?

13.5 Drugs in resuscitation

13.6 Preoperative assessment and investigations
- Consent and expectations
- Preoperative fasting and fluids
- Premedication
- Investigations

13.7 Anaesthetic issues in the emergency situation
- Anaesthetic techniques
- Safety of general and conduction techniques
- Choice of technique in emergency anaesthesia

13.8 Important medical conditions for the anaesthetist
- Anaemia
- Hypertension
- Respiratory diseases - Tuberculosis, Asthma and chronic bronchitis
- Diabetes
- Obesity
- Prevention of blood spread infections during anaesthesia

14. Practical anaesthesia

14.1 General anaesthesia
- Preparation for General anaesthesia
- Intravenous induction
- Intramuscular
- Inhalational
- Using draw over apparatus
- Using a compressed gas machine
- Maintenance of anaesthesia

14.2 Anaesthesia during pregnancy and for operative delivery

14.3 Paediatric anaesthesia
- preparations before induction

14.4 Conduction anaesthesia
- Toxicity and safety of local anaesthetic drugs

14.5 Specimen anaesthetic techniques
- Ketamine anaesthesia
- General anaesthesia with intubation
- Inhalational technique without intubation
- Total intravenous anaesthesia
- Specimen spinal technique for elective caesarean section
- Anaesthesia for evacuation of retained products of conception (ERPC)
- Emergency laparotomy
- Emergency case with a complicated airway

14.6 Monitoring the anaesthetized patient

14.7 Postoperative management
- In Recovery
- Post operative extubation
- Pain management and techniques
- Post operative fluid management
15. Anaesthetic infrastructure and supplies

15.1 Equipment and supplies for different level hospitals 15–1
15.2 Anaesthesia and oxygen 15–5
   » Oxygen sources
   » Oxygen cylinders
   » Safe use of oxygen cylinders
   » Supplies, equipment and maintenance
   » Oxygen concentrators

15.3 Fires, explosions and other risks 15–11
15.4 Care and maintenance of equipment 15–12

PART 6: TRAUMATOLOGY AND ORTHOPAEDICS

16. Acute trauma management

16.1 Trauma in perspective 16–1
16.2 Principles of Primary Trauma Care Management 16–2
16.3 Six phases of Primary Trauma Care Management 16–3
16.4 Procedures 16–8
   » Insertion of the chest drain and underwater seal Drainage
   » Tracheostomy

17. Orthopaedic techniques

17.1 Traction 17–1
   » Skin traction
   » Skeletal traction
17.2 casts and splints 17–6
   » Materials
   » Cast application
   » Splint application
17.5 Physical therapy- why, who, what and how 17–13

18 Orthopaedic trauma

18.1 Upper extremity injuries 18–1
18.2 The hand 18–11
18.3 Fractures of the pelvis and hip 18–14
18.4 Injuries of the lower extremity 18–17
18.5 Spine injuries 18–25
18.6 Fractures in children 18–28
18.7 Amputations- severe infections and irreparable trauma 18–31
18.8 Complications 18–33
18.9 War related trauma 18–36
   » Gunshot wounds
   » Landmine injuries

19 General orthopaedics

19.3 Infection 19–5
   » Septic arthritis
   » Pyogenic osteomyelitis
